Preface to the First Edition

xiii

Chapter 1	DECISION MAKING—A QUANTITATIVE APPROACH.....	1–20
	<i>The Decision Dilemma</i>	1
	1.1 Introduction	2
	1.2 Operations Research—The Quantitative Approach to Decision Making	4
	1.3 Definitions of Operations Research	5
	1.4 Characteristics of Operations Research	6
	1.5 Models and Modelling in OR	7
	1.6 OR Methodology	8
	1.7 OR Techniques	14
	1.8 Typical Applications of Operations Research	16
	1.9 OR and Computers	17
	1.10 Summary	17
	<i>Concept Quiz</i>	17
	<i>Questions</i>	19
Chapter 2	LINEAR PROGRAMMING—GRAPHIC METHOD	21–61
	<i>Crisis at Bhilpur</i>	21
	2.1 Introduction	22
	2.2 Basic Requirements of a Linear Programming Problem	23
	2.3 Graphical Solution to a Maximisation Problem	24

2.4 Summary of Graphical Maximisation Procedure 27
2.5 Technical Issues in Linear Programming 28
2.6 Minimisation Problem 30
2.7 Solution by Computer Package 32
2.8 Problem Formulation 34
2.9 Basic Assumptions of Linear Programming 49
2.10 Advantages and Limitations of Linear Programming 50
2.11 Summary 51
Concept Quiz 51
Questions 54

Chapter 3 **LINEAR PROGRAMMING—SIMPLEX METHOD 62–134**

Manthan 62
3.1 Introduction 63
3.2 Setting up the Initial Solution 64
3.3 Developing the Second Solution 67
3.4 Developing the Third Solution 71
3.5 Developing the Fourth Solution 72
3.6 Summary of Steps in the Simplex Maximisation Procedure 74
3.7 Simplex Solution to a Minimisation Problem 74
3.8 Developing the Second Solution 77
3.9 Developing the Third Solution 78
3.10 Dual 80
3.11 Sensitivity Analysis 85
3.12 Solution by Computer Package 89
3.13 Technical Issues in the Simplex Method 93
3.14 Two Phase Method of Solving Problems Involving Artificial Variables 98
3.15 Solved Examples 100
3.16 Summary 119
Concept Quiz 120
Questions 122

Chapter 4 **TRANSPORTATION MODEL 135–202**

Ashiana 135
4.1 Introduction 136
4.2 Setting up the Transportation Tableau 136
4.3 Testing the Solution for Improvement 146
4.4 The Unbalanced Case (Demand and Supply are Unequal) 156
4.5 Multiple Solutions 158
4.6 Degeneracy 159
4.7 Maximisation Problems 161
4.8 Least Time Transportation Model 163
4.9 Transshipment Model 166
4.10 Restrictions on Routes 167

	4.11	Solution by Computer Package	167
	4.12	Solved Examples	170
	4.13	Summary	186
		<i>Concept Quiz</i>	186
		<i>Questions</i>	189
Chapter 5		ASSIGNMENT MODEL	203–248
		<i>Mettalica Works Limited</i>	203
	5.1	Introduction	204
	5.2	The Hungarian Method	205
	5.3	Summary of the Assignment Method	209
	5.4	Maximisation Case	209
	5.5	Travelling Salesman Problem	212
	5.6	Solution by Computer Package	215
	5.7	Solved Examples	217
	5.8	Summary	235
		<i>Concept Quiz</i>	236
		<i>Questions</i>	239
Chapter 6		INTEGER PROGRAMMING	249–261
		<i>Gharana Home Appliances</i>	249
	6.1	Introduction	249
	6.2	Gomory’s Fractional Cut Method	250
	6.3	Branch and Bound Method	252
	6.4	Solution by Computer Package	256
	6.5	Summary	257
		<i>Concept Quiz</i>	257
		<i>Questions</i>	259
Chapter 7		GOAL PROGRAMMING	262–277
		<i>Sunder Textiles</i>	262
	7.1	Introduction	263
	7.2	Special Features of Goal Programming	263
	7.3	Formulation Procedure	263
	7.4	Solution by Computer Package	269
	7.5	Summary	272
		<i>Concept Quiz</i>	272
		<i>Questions</i>	274
Chapter 8		DYNAMIC PROGRAMMING	278–296
		<i>Sangeet Electronics</i>	278
	8.1	Introduction	279
	8.2	Definitions	279
	8.3	Stage Coach Problem	280

	8.4	Solution by Computer Package	289
	8.5	Summary	291
		<i>Concept Quiz</i>	292
		<i>Questions</i>	293
Chapter 9	PROBABILITY		297–329
		<i>Oil or Gas</i>	297
	9.1	Introduction	297
	9.2	Basic Probability Concepts	298
	9.3	Approaches to Probability	299
	9.4	Addition Rules	301
	9.5	Probabilities under Conditions of Statistical Independence	305
	9.6	Probabilities under Conditions of Statistical Dependence	309
	9.7	Revising Prior Estimates of Priorities: Baye’s Theorem	313
	9.8	Solved Examples	315
	9.9	Summary	322
		<i>Concept Quiz</i>	323
		<i>Questions</i>	326
Chapter 10	PROBABILITY DISTRIBUTIONS		330–355
		<i>Vahan Ancillaries</i>	330
	10.1	Introduction	331
	10.2	Types of Probability Distributions	332
	10.3	Random Variable	332
	10.4	Expected Value of a Random Variable	332
	10.5	Mean of a Distribution	334
	10.6	Standard Deviation of a Distribution	334
	10.7	Binomial Distribution	335
	10.8	Poisson Distribution	336
	10.9	Normal Distribution	337
	10.10	Application Areas of Probability and Probability Distributions	344
	10.11	Solved Examples	345
	10.12	Summary	349
		<i>Concept Quiz</i>	351
		<i>Questions</i>	353
Chapter 11	INVENTORY MODELS		356–397
		<i>Kalpataru Bhandar</i>	356
	11.1	Introduction	357
	11.2	Costs Associated with Inventory	358
	11.3	EOQ Model	359
	11.4	EOQ Model—Discounts and Price Breaks	361
	11.5	EOQ Model and Production Processes	363

11.6	EOQ Model—Eliminating the Instant Receipt Assumption	363
11.7	A Practical Approach—When Costs are not Known	364
11.8	Selective Inventory Control—ABC Analysis	367
11.9	When to Order	371
11.10	Determining Optimal Level of Safety Stock—When Out of Stock Costs are Known	373
11.11	Determining Optimal Level of Safety Stock—When Out of Stock Costs are Not Known	375
11.12	Fixed Order Quantity System	377
11.13	Fixed Interval System	378
11.14	Other Systems	379
11.15	Reordering with Planned Stockouts	380
11.16	Solution by Computer Package	381
11.17	Solved Examples	383
11.18	Summary	388
	<i>Concept Quiz</i>	389
	<i>Questions</i>	391

Chapter 12 **REPLACEMENT MODELS** **398–412**

	<i>Atithi Hotel</i>	398
12.1	Introduction	399
12.2	Replacement of Equipment Which Deteriorates with Time	399
12.3	Replacement of Items that Fail Completely	402
12.4	Staffing Problems	405
12.5	Solution with the Help of Computer	406
12.6	Summary	406
	<i>Concept Quiz</i>	407
	<i>Questions</i>	409

Chapter 13 **NETWORK MODELS—CPM AND PERT** **413–475**

	<i>Rasoi Appliances</i>	413
13.1	Introduction	414
13.2	Critical Path Method (CPM)	415
13.3	Definitions	416
13.4	Rules and Conventions	416
13.5	Drawing a Network (Activity on Arrow (AOA))	417
13.6	Calculating Earliest Start Time	419
13.7	Calculating Latest Finish Time (LFT)	420
13.8	Floats (Slacks), Critical Activities and Critical Path	421
13.9	Activity on Node (AON) Network	424
13.10	Crashing a Project	429
13.11	Resource Levelling	434
13.12	Control of Project Costs	436
13.13	Programme Evaluation and Review Technique (PERT)	438
13.14	Updating a Network	441

13.15	Difference between PERT and CPM	445
13.16	Solution by Computer Package	445
13.17	Solved Examples	450
13.18	Summary	461
	<i>Concept Quiz</i>	462
	<i>Questions</i>	464

Chapter 14 **DECISION THEORY** 476–519

	<i>On Oily Waters</i>	476
14.1	Introduction	477
14.2	Steps in Decision Making	479
14.3	Decision Making Environment	480
14.4	Decision Making under Uncertainty	480
14.5	Decision Making under Risk	483
14.6	Expected Value of Perfect Information (EVPI)	486
14.7	An Alternative Approach—Minimising Expected Losses	487
14.8	Marginal Analysis	488
14.9	Utility as a Decision Criterion	489
14.10	Decision Trees	492
14.11	Expected Value of Sample Information (EVSI)	495
14.12	Bayesian Revision of Probabilities	495
14.13	Solution by Computer Package	498
14.14	Solved Examples	501
14.15	Summary	508
	<i>Concept Quiz</i>	510
	<i>Questions</i>	512

Chapter 15 **THEORY OF GAMES** 520–546

	<i>Blue Scooters Limited</i>	520
15.1	Introduction	521
15.2	Assumptions, Definitions and Classification of Games	521
15.3	Two-Person Zero Sum Games	522
15.4	Pure Strategies and Saddle Points	523
15.5	Mixed Strategies	524
15.6	Shortcut Method for Finding Optimum Mixed Strategies	526
15.7	Solution of Games by Dominance	527
15.8	Graphical Solution of Games	530
15.9	Solution by Linear Programming	535
15.10	Solved Examples	537
15.11	Solution by Computer Package	540
15.12	Summary	541
	<i>Concept Quiz</i>	541
	<i>Questions</i>	543

Chapter 16	SEQUENCING	547–562
	<i>Vishwakarma Workshop</i>	547
	16.1 Introduction	548
	16.2 n Jobs 2 Stations	548
	16.3 n Jobs 2 Stations—Different Sequence	549
	16.4 n Jobs m Stations	550
	16.5 2 Jobs Through n Stations in Random Order	552
	16.6 Solution by Computer Package	554
	16.7 Summary	556
	<i>Concept Quiz</i>	556
	<i>Questions</i>	558
Chapter 17	QUEUING THEORY	563–586
	<i>Operation Raksha</i>	563
	17.1 Introduction	564
	17.2 Queuing and Cost Behaviour	564
	17.3 Definitions for Queuing Systems	565
	17.4 Single Channel, Single Server Queuing Model (M/M/1)	568
	17.5 Economic Aspects of Queuing	571
	17.6 Solution by Computer Package	572
	17.7 Solved Examples	574
	17.8 Summary	580
	<i>Concept Quiz</i>	581
	<i>Questions</i>	583
Chapter 18	SIMULATION	587–620
	<i>Happy Landings</i>	587
	18.1 Introduction	588
	18.2 Steps Involved in Monte Carlo Simulation	589
	18.3 Solved Examples	594
	18.4 Summary	612
	<i>Concept Quiz</i>	612
	<i>Questions</i>	613
Chapter 19	MARKOV ANALYSIS	621–641
	<i>Adla Badli</i>	621
	19.1 Introduction	622
	19.2 Markov Process	622
	19.3 Transition Matrix	623
	19.4 Prediction of Market Shares for Future Periods	624
	19.5 Steady State Conditions	626
	19.6 Absorbing Chains	628
	19.7 Solved Examples	630

19.8 Solution by Computer Package **633**
19.9 Summary **634**
Concept Quiz **634**
Questions **636**

Appendix A Mathematics for Managers **643–701**
Appendix B Standard Normal Probability Distribution **702–703**
Appendix C Values of $e^{-\lambda}$ for Computing Poisson Probabilities **704**
Appendix D Table of Random Numbers **705–706**
Bibliography **707–710**
Answers to Concept Quiz **711–717**
Answers to Selected Questions **719–754**
Index **755–758**

PREFACE

The overwhelming response to the Third Edition of the book has encouraged us to present the Fourth Edition of the book. The changes in this edition are based on the feedback and suggestions from our readers and colleagues which we gratefully acknowledge.

We have added a separate supplement ‘Mathematics for Managers’ in the form of an appendix, which covers Matrix Algebra and Differential Calculus. While these do not strictly come under the purview of operations research, a large number of academic institutions and universities include these in their syllabi for management programmes at the undergraduate and postgraduate levels. The inclusion of this supplement will offer a complete coverage of the syllabi in one book.

Since most computer software in use today for network analysis and project management draw networks in an Activity on Node format, we have included a section on drawing of networks in the Activity on Node format so that readers can interpret computer solutions with ease.

We have also included a number of solved and unsolved problems. We have retained the format of our earlier editions and have stuck to the simplicity that was our goal from the very outset—to present material in an easily understandable manner sans the rigour of classical mathematics, and amply illustrated with life-like problems and examples.

A revised CD is available as resource material for instructors. It contains PowerPoint presentations for all chapters and can be effectively used along with the normal ‘chalk and talk’ style.

We look forward to continuing support from our colleagues and our readers and shall welcome any suggestions for further improvement so that we can fully satisfy the needs and requirements of our readers. These can be sent by e-mail to rbkhanna@gmail.com.

RB Khanna

PREFACE TO THE FIRST EDITION

Decision making is a manager's primary task. The quality of the decisions can be the difference between success and failure of a business enterprise. While a qualitative analysis is invariably carried out, a quantitative analysis is often avoided. The two, used conjunctively can reinforce, negate or call for a review of decisions which may have otherwise been taken. Business is associated with finance and commerce and, hence, the arts. However, the bottom line for any business or enterprise is profits and these can only be measured in monetary terms. Some quantification is always involved in planning inventories, production schedules and calculating revenues and expenses. Yet, managers are generally shy of mathematics. It is not just the computational difficulty that turns them away but also the fact that quantification implies commitment and a certain degree of precision. One can say that Option A is better than Option B but quantitative techniques require that the decision maker or analyst states by how much Option A is better than B.

Operations Research provides the basis for decision making in a scientific and rational manner. It is often shrouded in mathematical complexity which 'scares' away managers and management students. The advent of high-speed computers and the availability of adequate software packages has eased the tedium of manual computations. Stress must shift from the actual computational methods used, to understanding of problem situations and identifying solution approaches.

This book is aimed at providing the management students and managers a working knowledge of Operations Research and its applications. Engineering students may not find the mathematical rigour they are used to, but the book aims at providing them with a better understanding of the practical utility of mathematical modelling and techniques. The book attempts to put across techniques in a language and manner which does not require more than basic arithmetic that every person learns in school. Effort has been made to avoid mathematical symbols beyond the

elementary ones of addition, subtraction, multiplication and division. Rigorous mathematical proofs, generalised symbolic models and general equations have been avoided as far as practical. While simplicity has been the aim of this book it is limited by the Einsteinian injunction:

Everything should be made simple, but not simpler than simple.

The book approaches the subject from a practical point of view and all problems are related to life-like situations similar to those faced so often by managers in their day to day functioning. Quite a few problems have been taken from old question papers of various universities and professional examinations. Each chapter begins with a case study. We have also included a section in each chapter dealing with solutions of the problems with the help of computer software. Answers have been provided for all the unsolved exercises so that the readers can gain confidence in their ability to solve problems. Problem formulations have also been included where considered necessary.

Suggestions for improvement to the text are most welcome and will be gratefully acknowledged.
